PROFESSIONAL SUMMARY

Cloud infrastructure leader with 16 years of experience architecting and scaling enterprise systems—from mission-critical military networks supporting 5,000+ users to multi-account AWS environments serving financial sector clients. I build DevOps practices from the ground up: establishing IaC standards, designing CI/CD pipelines, and mentoring engineers to deliver infrastructure that scales. Background includes direct support for Naval Special Warfare operations, demonstrating ability to deliver zero-defect solutions under pressure.

TECHNICAL EXPERTISE

Cloud Platforms: AWS (Organizations, EC2, ECS, RDS, S3, Lambda, CloudFront, Route53, IAM), Azure, Cloudflare

Infrastructure as Code: Terraform, Terraform Cloud, GitHub Actions, CI/CD Pipeline Design

Containers & Orchestration: Kubernetes, Docker, ECS, Container Security

Automation & Development: Python, Bash, PowerShell, Lambda Functions, React, REST APIs

Networking & Security: VPC Architecture, CloudFront, FortiGate, AWS Network Firewall, WAF

Platforms & Identity: Linux, Windows Server, Active Directory, Entra ID, SSO/SAML

PROFESSIONAL EXPERIENCE

Lead DevOps Engineer

Netcov | Remote | 2024 – Present

- Own the entire Infrastructure as Code practice for the organization, architecting and maintaining Terraform modules for AWS, Azure, and Cloudflare that serve as the foundation for all client deployments
- Established DevOps standards and best practices, mentoring engineer on IaC patterns, code review processes, and deployment strategies
- Architect cloud solutions translating complex business requirements into scalable, cost-effective, and secure infrastructure designs
- Design and maintain CI/CD pipelines using GitHub Actions, enabling automated testing, security scanning, and infrastructure deployments
- Manage container orchestration with Kubernetes and Docker, supporting production workloads across multiple environments
- Develop Python-based Lambda functions automating operational workflows, monitoring, and cross-service integrations

Cloud Engineer

ThinkStack | Remote | 2022 – 2024

- Managed 70+ AWS accounts across 2 AWS Organizations as part of a 4-person cloud engineering team delivering managed services to financial sector clients with strict compliance requirements
- Developed 30+ reusable Terraform modules standardizing infrastructure provisioning for EC2, RDS, S3, ECS, VPC, and networking components—reducing deployment time by 60% and ensuring consistency across environments
- Drove resolution of 500+ client escalations, identifying root causes and implementing systemic improvements that reduced recurring incidents by 40%
- Implemented CI/CD pipelines using Terraform Cloud and GitHub Actions with automated policy enforcement, state management, and drift detection
- Deployed and configured FortiGate firewalls and AWS Network Firewalls, implementing defense-in-depth security controls for client environments

- Led disaster recovery testing initiatives, validating backup procedures and ensuring RTO/RPO requirements were met across client portfolio
- Performed cost optimization assessments identifying \$50K+ in annual savings through rightsizing, Reserved Instance recommendations, and architecture improvements

U.S. NAVY EXPERIENCE

Information Systems Technician | Naval Special Warfare

SEAL Team 7 / TACCOMM-1 | San Diego, CA | 2018 – 2022

- Deployed as sole Communications Technician embedded with SEAL platoon, providing full-spectrum tactical communications in austere environments with zero tolerance for failure
- Managed tactical communications suite including Harris HF/SHF/SATCOM systems, ROVER video receivers, Blue Force Trackers, and mobile satellite systems
- Primary Training Coordinator for TACCOMM-1: developed curriculum and trained NSW support personnel on equipment operation, troubleshooting, and deployment planning
- Completed U.S. Army Airborne School; performed static line jumps in support of NSW operations

Information Systems Technician | 6th Fleet Flagship

USS Mount Whitney (LCC-20) | Gaeta, Italy | 2015 – 2018

- Radio Watchfloor Supervisor directing real-time communications for U.S. Naval Forces Europe and NATO operations, supervising 12 sailors across multiple watch sections
- Processed 1,000+ operational messages weekly; led installation of blade server infrastructure modernizing NIPR/SIPR network services
- Work Center Supervisor for 3M maintenance program; successfully completed INSURV inspection
- Awarded Navy Achievement Medal; supported Baltic Operations and NATO multinational exercises

Information Systems Technician | Flag Support

Navy Recruiting Command (CNRC) | Millington, TN | 2012 – 2015

- Provided direct IT support to Commander, Navy Recruiting Command (Rear Admiral), coordinating 10+ VTCs weekly for flag-level operations
- Resolved 1,000+ helpdesk tickets supporting enterprise recruiting applications used by field recruiters nationwide
- Awarded Navy Achievement Medal; recognized as Sailor of the Quarter three times

Information Systems Technician | Aircraft Carrier

USS George Washington (CVN-73) | Yokosuka, Japan | 2009 – 2012

- Watch Supervisor overseeing IT operations across classified and unclassified networks supporting 5,000+ crew on forward-deployed nuclear aircraft carrier
- Administered 15 Unix/Linux/Windows servers; resolved 700+ incidents; provisioned 200+ user accounts
- Supported 7 major operations and joint exercises throughout Western Pacific; passed 3 annual inspections

CERTIFICATIONS & TRAINING

- AWS Solutions Architect – Professional
- AWS SysOps Administrator – Associate
- AWS Solutions Architect – Associate
- HashiCorp Terraform Associate
- CompTIA Security+
- U.S. Army Airborne School
- Security Clearance Eligible
